

Urine Flow & Post-Void Residue

On your next visit to our clinic, we would like to check your flow (strength of your urinary stream) and state of bladder emptying.

Please attend with a reasonably full bladder – full enough so that you can pass urine when we ask you to, but not so full that you cannot wait if there is a queue.

We will ask you to urinate into a special machine, which is not very different from an ordinary toilet. It is as simple as that!

Following that we will scan your bladder (just like a pregnancy scan) to see how much urine is left.

This simple test will help us in making decisions about your urinary problems.

Thank you for following the instructions.
